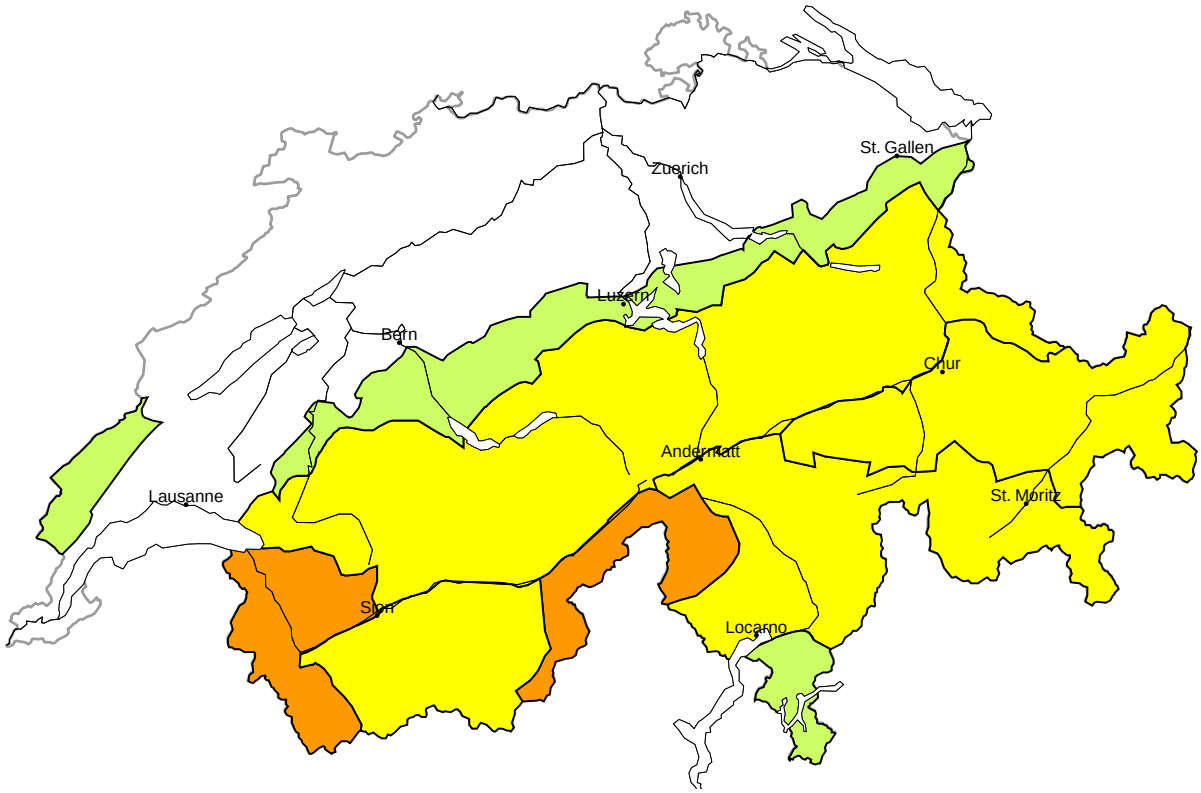
Avalanche bulletin through Thursday, 23. January 2025

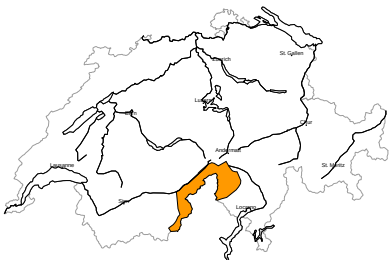
Avalanche danger

updated on 22.1.2025, 17:00



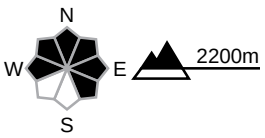
region A

Considerable (3-)



Wind slab, Persistent weak layers

Avalanche prone locations

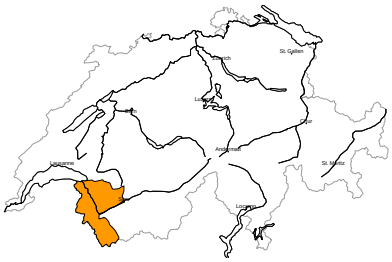


Danger description

The new snow and wind slabs are lying on top of a weakly bonded old snowpack on west to north to east facing aspects. Even single snow sport participants can release avalanches easily. Avalanches can be triggered in the old snowpack and reach medium size.
Snow sport activities outside marked and open pistes call for experience in the assessment of avalanche danger.

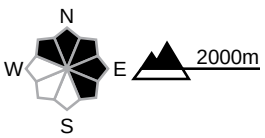
region B

Considerable (3-)



Wind slab

Avalanche prone locations



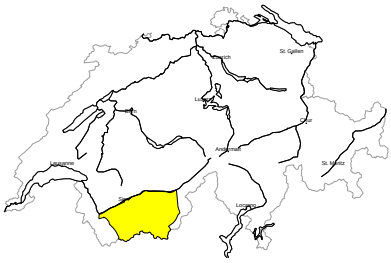
Danger description

As a consequence of new snow and a moderate to strong westerly wind, wind slabs will form. The number and size of avalanche prone locations will increase as the day progresses. Even single snow sport participants can release avalanches easily, including medium-sized ones.
Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger.

Danger levels 1 low 2 moderate 3 considerable 4 high 5 very high

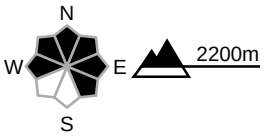
Avalanche bulletin through Thursday, 23. January 2025

region C — Moderate (2=)



Wind slab, Persistent weak layers

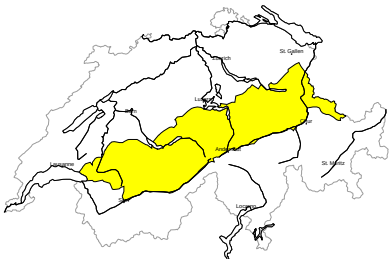
Avalanche prone locations



Danger description

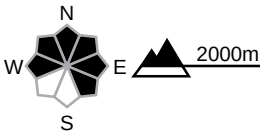
Some fresh snow and the resulting mostly small wind slabs will be deposited on the unfavourable surface of an old snowpack. Avalanches can additionally in isolated cases be released in the old snowpack also. Avalanches can reach medium size.
Backcountry touring calls for careful route selection.

region D — Moderate (2=)



Wind slab

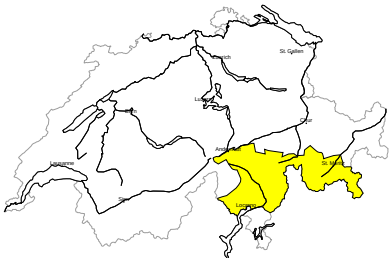
Avalanche prone locations



Danger description

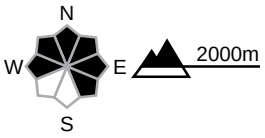
Some fresh snow and the mostly small wind slabs that are forming adjacent to ridgelines and in gullies and bowls are in some cases prone to triggering. Avalanches can reach medium size in isolated cases. The wind slabs are to be evaluated with care and prudence in particular in very steep terrain.

region E — Moderate (2=)



Persistent weak layers

Avalanche prone locations



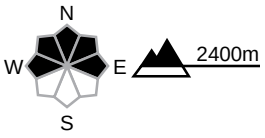
Danger description

Avalanches can in some cases be released in the old snowpack and reach medium size in isolated cases. These avalanche prone locations are to be found in particular in gullies and bowls. In addition mostly small wind slabs will form especially adjacent to ridgelines and in pass areas as well as in the high Alpine regions.
Backcountry touring calls for careful route selection.

region F — Moderate (2-)

Wind slab, Persistent weak layers

Avalanche prone locations



Danger description

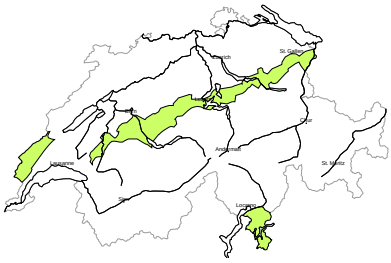
Avalanches can in isolated cases be released in the old snowpack and reach medium size in isolated cases. In addition small wind slabs will form adjacent to ridgelines and in pass areas and in the high Alpine regions as the day progresses.
Apart from the danger of being buried, restraint should be exercised as well in view of the danger of avalanches sweeping people along and giving rise to falls.

Danger levels 1 low 2 moderate 3 considerable 4 high 5 very high

Avalanche bulletin through Thursday, 23. January 2025

region G

Low (1)



No distinct avalanche problem

Only a little snow is lying. Individual avalanche prone locations are to be found in extremely steep terrain. Restraint should be exercised because avalanches can sweep people along and give rise to falls.
