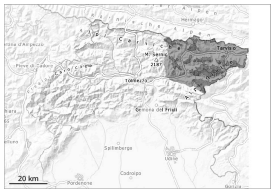
Danger Level 4 - High



1600m

Tendency: Constant avalanche danger
on Thursday 29 01 2026

Wind slab

New snow

Persistent weak layer

Persistent weak layer

In the course of the day danger level 4 (high) will be reached. It is inadvisable to engage in backcountry touring.

Intensive precipitation. The wind will be moderate to strong. The meteorological conditions will cause a rise in the avalanche danger as the day progresses. The new snow and wind slabs are bonding poorly with the old snowpack. In particular on shady slopes the avalanches can be released in deep layers of the snowpack.

Snowpack

Danger patterns dp.5: snowfall after a long period of cold | dp.1: deep persistent weak layer

As a consequence of new snow and a moderate to strong wind, dangerous wind slabs will form. New snow and wind slabs are lying on a weakly bonded old snowpack. Numerous weak layers exist in the old snowpack in particular on shady slopes.

Tendency

The weather will be cloudy. Over a wide area light precipitation.

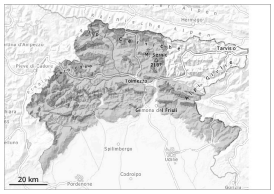
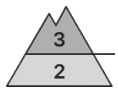
Danger Level 3 - Considerable





1400m

Tendency: Constant avalanche danger
on Thursday 29 01 2026

Wind slab

1400m

Persistent
weak layer

1400m

Persistent
weak layer

1400m

A lot of snow has fallen over a wide area. Considerable avalanche danger will prevail.

The new snow and wind slabs are bonding poorly with the old snowpack in many places. The avalanche prone locations are to be found in particular adjacent to ridgelines and in gullies and bowls and at transitions from a shallow to a deep snowpack. In particular on steep shady slopes the avalanches can be released in deep layers of the snowpack. The fresh wind slabs can be released, even by a single winter sport participant.

Snowpack

Danger patterns dp.5: snowfall after a long period of cold | dp.1: deep persistent weak layer

As a consequence of snowfall and the wind, a treacherous avalanche situation developed. New snow and wind slabs are lying on a weakly bonded old snowpack. Numerous weak layers exist in the old snowpack. They are to be found in particular on shady slopes. The snowpack will be subject to considerable local variations.

Tendency

The weather will be cloudy. Over a wide area light precipitation.
