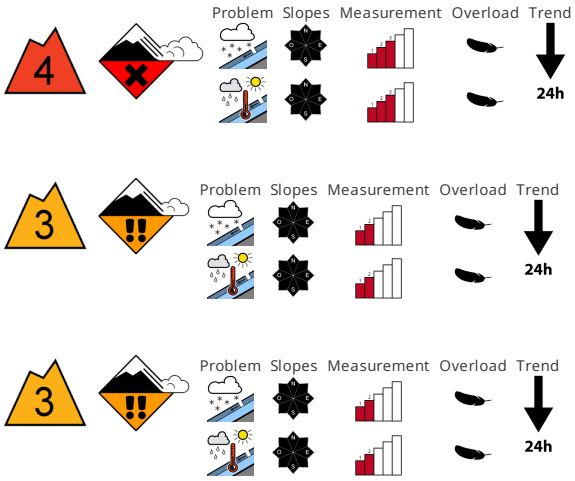
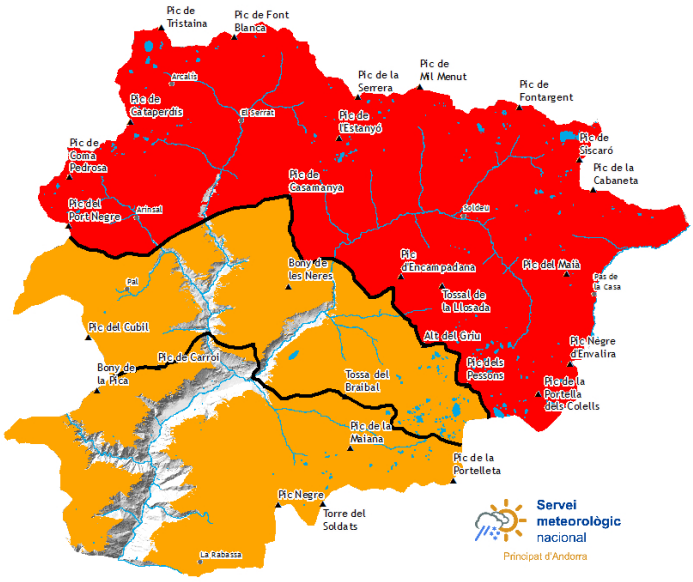
BUTLLETÍ DEL PERILL D'ALLAUS DEL PRINCIPAT D'ANDORRA

Prepared on 16/02/2026 16:00
Next update 17/02/2026 at 16 am





SNOW QUALITY

The new snow and wind slabs of the last three days must be evaluated with care and prudence. Medium-sized and, in isolated cases, large natural avalanches are to be expected especially in the regions exposed to heavier precipitation. Gradual decrease in danger of moist avalanches as a consequence of the ceasing of precipitation. The conditions are dangerous for backcountry touring and other off-piste activities. Careful route selection and spacing between individuals are recommended. Restraint is advisable on this first sunny day after a long period of poor weather.

STABILITY OF THE SNOW MANTLE

As a consequence of new snow and wind the wind slabs have increased in size. Must be evaluated with care and prudence. Up to high altitudes rain will fall until the evening especially in the north. The rain will give rise to moistening of the snowpack over a wide area in particular at low and intermediate altitudes. Outgoing longwave radiation during the night will be quite good. There is a danger of falling on the icy crust. High altitudes :. The new snow will become increasingly prone to triggering sunny slopes.

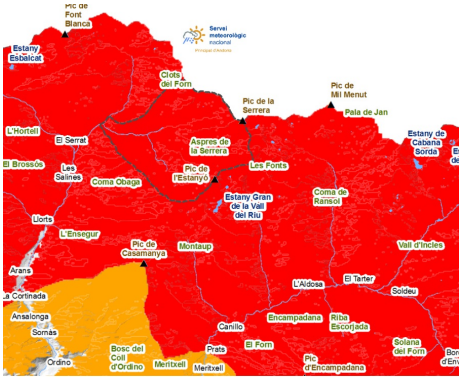
OFF-PISTE SNOW COVER THICKNESSES

North zone		Snow thickness		
Snowpack		1500m	2000m	2500m
N	1300 m	50 cm	150 cm	200 cm
S	1400 m	30 cm	100 cm	150 cm

Center area		Snow thickness		
Snowpack		1500m	2000m	2500m
N	1300 m	30 cm	150 cm	200 cm
S	1400 m	10 cm	100 cm	150 cm

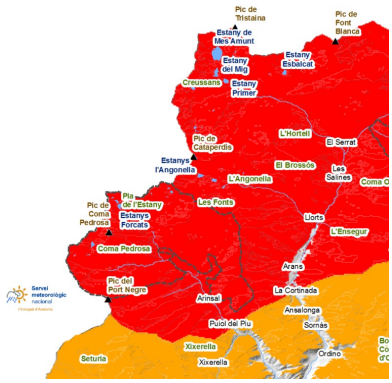
South zone		Snow thickness		
Snowpack		1500m	2000m	2500m
N	1300 m	30 cm	120 cm	150 cm
S	1400 m	10 cm	60 cm	100 cm

Detailed information for protected areas



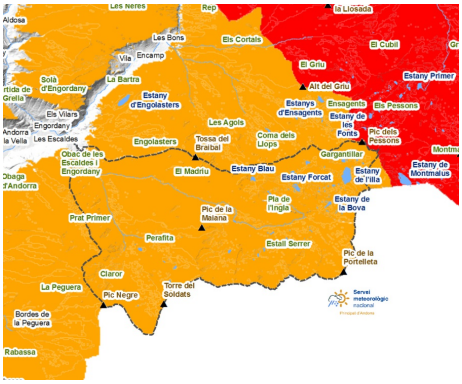
SORTENY

The snowfalls of the weekend have been consistent and have left thicknesses of new snow greater than 50 cm, shaped by the wind. The rain will moisten the mantle up to medium levels and the overload can bring down avalanches in a natural way Activities outside the controlled slopes require experience and great care in choosing the territory.



COMAPEDROSA

Mountain activities are not recommended until the recent snow has stabilized. Numerous natural avalanches are expected.



MADRIU-PERAFITA-CLAROR

There is also snow in the upper part of the Madriu, although the snowfall in the south of the country has been less intense, we also expect the formation of wind patches. The rain will moisten the recent snow at low altitudes, making access with skis difficult.
