Danger Level 3 - Considerable

Treeline

Tendency: Constant avalanche danger
on Thursday 26 03 2026

Wind slab

Treeline

Persistent weak layer

1900m

Wind slabs represent the main danger.

The wind slabs of last week represent the main danger. As a consequence of new snow and strong wind the avalanche prone locations will become more prevalent. They can be released very easily. These have formed especially in gullies and bowls, and behind abrupt changes in the terrain. Weak layers exist in the old snowpack on northwest, north and northeast facing slopes. Avalanches can be triggered in the old snowpack reach large size in particular on northwest, north and northeast facing slopes.
Snow sport activities outside marked and open pistes call for experience and great restraint.

Snowpack

Danger patterns dp.6: cold, loose snow and wind | dp.1: deep persistent weak layer

The small quantity of fresh snow of the last few days and in particular the wind slabs formed by the strong wind are lying on the unfavourable surface of an old snowpack.
Individual weak layers exist in the old snowpack especially on shady slopes. Avalanches can in some places be released in deep layers in particular on northwest, north and northeast facing slopes.
Sunshine and high temperatures will give rise as the day progresses to moistening of the snowpack in particular on sunny slopes.

Danger Level 2 - Moderate

1500m

Tendency: Constant avalanche danger
on Thursday 26 03 2026

Wind slab

1500m

Wet snow

1300m

Wind slabs and wet snow represent the main danger.

As a consequence of new snow and wind individual small to medium-sized slab avalanches are possible above approximately 1300 m.
In the vicinity of peaks a dangerous avalanche situation will be encountered in some localities. The more recent wind slabs and can be released easily.
Avalanches can penetrate down to the ground and reach medium size in some cases.

Snowpack

Danger patterns dp.6: cold, loose snow and wind | dp.10: springtime scenario

The weather conditions as the day progresses will give rise to unfavourable bonding of the snowpack in some places.

Danger Level 1 - Low

Tendency: Constant avalanche danger
on Thursday 26 03 2026

Wet snow

1300m

Wet snow represents the main danger.

As the day progresses as a consequence of warming during the day there will be an increase in the danger of wet avalanches. Above approximately 1300 m small moist and wet avalanches are possible.

Snowpack

Danger patterns dp.10: springtime scenario

The snowpack will be in most cases moist.
