

Danger Level 2 - Moderate

Wet snow

Treeline

Snowpack stability: **very poor**

Frequency: **few**

Avalanche size: **medium**

Error: Incomplete joker sentence

As a consequence of warming during the day and the solar radiation, the likelihood of wet avalanches being released will increase significantly in particular on steep slopes below the tree line. A clear night will be followed in the early morning by quite favourable conditions generally, but the danger of wet and gliding avalanches will increase later.

Snowpack

The old snowpack will be prone to triggering in some places. This applies in particular on steep shady slopes above approximately 2000 m.
