

Avalanche danger  
updated on 5.10.2025, 17:00

region A

Moderate (2+)

New snow

Avalanche prone locations

Danger description

In some regions 20 cm of snow has fallen since Saturday above approximately 2500 m. Up to 20 cm of snow will fall until Monday above approximately 2000 m. The new snow and wind slabs can be released by a single winter sport participant in some cases. Avalanches can reach medium size. These avalanche prone locations are to be found especially adjacent to ridgelines and in gullies and bowls and generally in high Alpine regions. The number and size of avalanche prone locations will increase with altitude. Even a small avalanche can sweep people along and give rise to falls. The Avalanche Warning Service currently has only a small amount of information, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

region B

Moderate (2=)

Wind slab

Avalanche prone locations

Danger description

In some regions up to 20 cm of snow has fallen since Saturday above approximately 2500 m. Up to 10 cm of snow will fall until Monday above approximately 2000 m. The new snow and wind slabs can be released by a single winter sport participant in some cases. These avalanche prone locations are to be found especially adjacent to ridgelines and in gullies and bowls and generally in high Alpine regions. The number and size of avalanche prone locations will increase with altitude. Even a small avalanche can sweep people along and give rise to falls.  
The Avalanche Warning Service currently has only a small amount of information, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

region C

Moderate (2=)

Wind slab

Avalanche prone locations

Danger description

In some regions up to 10 cm of snow has fallen since Saturday above approximately 2500 m. In some regions up to 20 cm of snow will fall until Monday above approximately 2000 m. The new snow and wind slabs can be released by a single winter sport participant in some cases. These avalanche prone locations are to be found especially adjacent to ridgelines and in gullies and bowls and generally in high Alpine regions. The number and size of avalanche prone locations will increase with altitude. Even a small avalanche can sweep people along and give rise to falls.  
The Avalanche Warning Service currently has only a small amount of information, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

region D

Low (1)

No distinct avalanche problem

Avalanche prone locations

Danger description

On very steep slopes and adjacent to ridgelines snow slides are possible, but they will be mostly small. Even a small avalanche can sweep people along and give rise to falls.

region E

Low (1)

Wind slab

Avalanche prone locations

Danger description

Some fresh snow and the mostly small wind slabs to be found especially in high Alpine regions represent the main danger. The number and size of avalanche prone locations will increase with altitude. Even a small avalanche can sweep people along and give rise to falls. The Avalanche Warning Service currently has only a small amount of information, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

## Snowpack and weather

updated on 5.10.2025, 17:00

### Snowpack

At the beginning of October, there was a thin snowpack, especially in the high Alpine regions and on north-facing slopes above 2600 to 2800 m. On steep north-facing slopes, Saturday's and Sunday's fresh and drifted snow was deposited on top of a faceted snowpack.

### Outlook

On Tuesday conditions will be partly cloudy in the north-east, with conditions elsewhere mostly sunny on Tuesday and Wednesday. Temperatures will rise significantly. The zero-degree level will be at 3800 m on Wednesday. The risk of dry avalanches must be borne in mind, especially on north-facing slopes above 2800 m and in the high Alpine regions in general. Moist snow slides are possible on steep sunny slopes. The risk of falling or being swept away must be borne in mind.
