

## Danger Level 2 - Moderate

Treeline

**Tendency: Increasing avalanche danger**  
on Friday 28 02 2025

Wind slab

Treeline

Snowpack stability: **poor**Frequency: **some**Avalanche size: **medium**

Gliding snow

Treeline

Snowpack stability: **fair**Frequency: **few**Avalanche size: **medium**

### Wind slabs at high altitude.

The avalanche prone locations are to be found in particular adjacent to ridgelines above approximately 2000 m and in gullies and bowls, and behind abrupt changes in the terrain. Wind-loaded slopes where surface hoar has been covered with snow are unfavourable.

### Snowpack

#### Danger patterns

dp.6: cold, loose snow and wind

dp.2: gliding snow

The snowpack will become in some cases unfavourable. In the course of the day visible wind slabs will form especially adjacent to ridgelines and in gullies and bowls. Also shady slopes where weaknesses exist in the old snowpack are dangerous. Whumpfung sounds and the formation of shooting cracks when stepping on the snowpack serve as an alarm indicating the danger.

## Danger Level 1 - Low

**Tendency: Constant avalanche danger** →  
on Friday 28 02 2025

Gliding snow

1500m

Snowpack stability: **fair**

Frequency: **few**

Avalanche size: **small**

Small avalanches are possible in isolated cases.

There is a danger of moist snow slides during the day.

## Snowpack

### Danger patterns

dp.2: gliding snow

dp.2: gliding snow

As a consequence of highly fluctuating temperatures and solar radiation the snowpack consolidated during the last few days. In many cases new snow is lying on a hard crust.
