

SECTOR ALPI OCCIDENTALI PIEMONTESI

AVALANCHE BULLETIN - ISSUED AT on 09/12/2023
by Servizio METEOMONT dell'ARMA dei CARABINIERI
in collaboration with Italian Air Force Meteorological Service

WARNING - SIGNIFICANT AND/OR INTENSE PHENOMENA

Attualmente sono presenti, sui settori meridionali, circa 10-15 cm ai 2000m. I quantitativi aumentano progressivamente procedendo verso nord, con circa 25-30 cm a 2000 sui settori occidentali e 25-50 su quelli settentrionali. In alta quota, il vento ha contribuito a rimaneggiare notevolmente il manto, determinando un innnevamento molto discontinuo, con ampie superfici in prossimità delle creste e formando i primi accumuli sui versanti sottovento e all'imbocco dei canali. For further information and details on weather forecasts and conditions please refer to www.meteoam.it

Sky condition							

According to EAWS standards Meteomont bulletin is a synoptic-scale system (regional scale). It shall be the user's responsibility to correlate the danger level evaluation of the bulletin with a detailed and expertise analysis of the zonal hazards (single slope), that could be markedly different. Meteorological forecast are issued at UTC (for Italy: in winter time UTC+1; in summer time UTC+2).

Bulletin is subjected to check processes through: the record of Observers and Avalanches and snow Experts data in C-Sifa; the validation by forecasters; the certification by Meteomont Section.
