

Avalanche danger

updated on 10.5.2024, 17:00

Morning

As the day progresses

region A

Low (1) Dry avalanches, whole day

No distinct avalanche problem

Avalanches can in isolated cases be released in near-surface layers and reach medium size. In high Alpine regions the avalanche prone locations are a little more prevalent. Apart from the danger of being buried, restraint should be exercised as well in view of the danger of avalanches sweeping people along and giving rise to falls. The Avalanche Warning Service currently has only a small amount of information that has been collected in the field, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

Moderate (2) Wet-snow avalanches, as the day progresses

Wet snow, Gliding snow

As a consequence of warming during the day and solar radiation moist snow slides and avalanches are possible. In addition gliding avalanches are possible. These can reach large size in isolated cases. Caution is to be exercised in areas with glide cracks.

Avalanche bulletin through Saturday, 11. May 2024

region B

Low (1) Dry avalanches, whole day

**No distinct avalanche problem**

Individual avalanche prone locations for dry avalanches are to be found in particular in extremely steep terrain. Apart from the danger of being buried, restraint should be exercised in particular in view of the danger of avalanches sweeping people along and giving rise to falls.

The Avalanche Warning Service currently has only a small amount of information that has been collected in the field, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

Moderate (2) Wet-snow avalanches, as the day progresses

Wet snow, Gliding snow

As a consequence of warming during the day and solar radiation moist snow slides and avalanches are possible.

In addition gliding avalanches are possible. These can reach large size in isolated cases. Caution is to be exercised in areas with glide cracks.

region C

Low (1) Wet-snow avalanches, whole day

**Gliding snow**

Only a little snow is now lying. Gliding avalanches are possible, even medium-sized ones. Caution is to be exercised in areas with glide cracks.

Snowpack and weather

updated on 10.5.2024, 17:00

Snowpack

In the high Alpine regions, there are still occasional weak layers in near-surface layers in which avalanches may be released. In general, however, the new snow from the beginning of the week has stabilised well. With the mild temperatures, the soaking of the snowpack continues to progress. This is particularly critical on north-facing slopes around 2600 to 3000 m with the first soaking of the snowpack. This means that wet slab avalanches are possible in deeper layers. East-, south- and west-facing slopes are less critical because the old snowpack there was already soaked up to the high Alpine regions in April.

Weather review for Friday, 10.05.2024

After a clear night, it was quite sunny during the day with cumulus clouds in the afternoon.

New snow

-

Temperature

The zero-degree level at midday was around 3000 m.

Wind

Winds were mostly light and blew from various directions.

Weather forecast until Saturday, 11.05.2024

After a clear night, it will be mostly sunny during the day with cumulus clouds and isolated showers in the afternoon.

New snow

-

Temperature

At midday at 2000 m, around +9 °C.

Wind

Winds will be mostly light.

Trend until Monday, 13.05.2024

Sunday

The night will be largely clear and during the day it will initially be mostly sunny. In the afternoon, it will become increasingly cloudy with showers, especially in the west. The zero-degree level will be around 3200 m.

The danger of dry avalanches will not change significantly. The danger of wet avalanches will increase in the afternoon.

Monday

It will be mostly overcast. In the north, there will be some clear spells during the day, with showers especially in the south. The snowfall level will be around 2600 m.

The danger of dry avalanches will not change significantly. Wet and gliding avalanches will still be possible.
