

Avalanche danger
updated on 28.4.2024, 17:00

region A Considerable (3=)

New snow

Avalanche prone locations

Danger description

The fresh snow and the sometimes large wind slabs represent the main danger. Single winter sport participants can release avalanches, including large ones. Backcountry touring calls for experience in the assessment of avalanche danger.

Moderate (2)

Wet snow

Avalanche prone locations

Danger description

As a consequence of solar radiation more frequent small and medium-sized moist loose snow avalanches are to be expected. In the event of prolonged bright spells this applies in particular in the western and central parts of the main Alpine ridge.

region B

Considerable (3-)

Wind slab

Avalanche prone locations

Danger description

As a consequence of new snow and a strong to storm force southerly wind, avalanche prone wind slabs formed at elevated altitudes. Avalanches can be released, even by a single winter sport participant and reach medium size.
Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger.

Moderate (2)

Wet snow

Avalanche prone locations

Danger description

As a consequence of solar radiation more frequent small and medium-sized moist loose snow avalanches are to be expected. In the event of prolonged bright spells this applies in particular in the western and central parts of the main Alpine ridge.

region C

Moderate (2+)

Wind slab

Avalanche prone locations

Danger description

The new snow and wind slabs are in some cases prone to triggering. Avalanches can in some places be released by people and reach medium size.
Backcountry touring and other off-piste activities call for careful route selection.

Moderate (2)

Wet snow

Avalanche prone locations

Danger description

As a consequence of solar radiation more frequent small and medium-sized moist loose snow avalanches are to be expected. In the event of prolonged bright spells this applies in particular in the western and central parts of the main Alpine ridge.

region D

Moderate (2=)

Wind slab

Avalanche prone locations

Danger description

As a consequence of a strong to storm force foehn wind, wind slabs formed in particular in gullies and bowls and behind abrupt changes in the terrain. They can be released by a single winter sport participant in some cases. Avalanches can reach medium size. The wind slabs in very steep terrain are to be bypassed as far as possible.

Moderate (2)

Wet snow, Gliding snow

Avalanche prone locations

Danger description

As a consequence of warming during the day and solar radiation moist snow slides and avalanches are possible. More gliding avalanches are possible, even large ones in isolated cases. Caution is to be exercised in areas with glide cracks.

region E

Moderate (2-)

Wind slab

Avalanche prone locations

Danger description

The wind slabs of the last few days are in some cases prone to triggering at elevated altitudes. They can in some places be released by people and reach medium size. The wind slabs in very steep terrain are to be bypassed as far as possible.

Moderate (2)

Wet snow, Gliding snow

Avalanche prone locations

Danger description

As a consequence of warming during the day and solar radiation moist snow slides and avalanches are possible. More gliding avalanches are possible, even large ones in isolated cases. Caution is to be exercised in areas with glide cracks.

region F

Moderate (2)

Wet snow, Gliding snow

Avalanche prone locations

Danger description

As a consequence of warming during the day and solar radiation moist snow slides and avalanches are possible.
More gliding avalanches are possible, even large ones in isolated cases. Caution is to be exercised in areas with glide cracks.

region G

Moderate (2)

Wet snow

Avalanche prone locations

Danger description

As a consequence of solar radiation more frequent small and medium-sized moist loose snow avalanches are to be expected. In the event of prolonged bright spells this applies in particular in the western and central parts of the main Alpine ridge.

region H

Low (1)

Gliding snow

On steep grassy slopes gliding avalanches and moist snow slides are possible, but they will be mostly small.
Caution is to be exercised in areas with glide cracks.

Snowpack and weather
