

Danger Level 2 - Moderate

In particular in the western Prealps, in the western and central parts of the main Alpine ridge new snow.

In particular areas that are largely protected from the wind where weaknesses exist in the old snowpack are especially unfavourable.

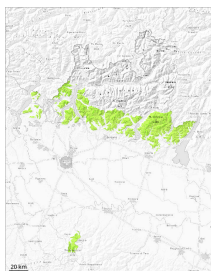

Snowpack

Danger patterns dp.1: deep persistent weak layer dp.4: cold following warm / warm following cold

The snowpack will become in some cases unfavourable. In the course of the day visible wind slabs will form especially adjacent to ridgelines and in gullies and bowls. Also shady slopes where weaknesses exist in the old snowpack are dangerous. Whumpfung sounds and the formation of shooting cracks when stepping on the snowpack serve as an alarm indicating the danger.

Danger Level 1 - Low

Tendency: Constant avalanche danger →
on Wednesday 26 02 2025

New snow

Snowpack stability: **fair**

Frequency: **few**

Avalanche size: **small**

Small avalanches are possible in isolated cases.

There is a danger of moist snow slides during the day.

Snowpack

Danger patterns

dp.10: springtime scenario

As a consequence of low temperatures and solar radiation the snowpack consolidated during the last few days.
