Danger Level 3 - Considerable

AM:

Tendency: Constant avalanche danger
on Tuesday 06 05 2025

New snow

Snowpack stability: poor

Frequency: some

Avalanche size: large

Wet snow

Snowpack stability: poor

Frequency: some

Avalanche size: medium

PM:

Tendency: Constant avalanche danger
on Tuesday 06 05 2025

New snow and wet snow represent the main danger. Medium-sized and, in isolated cases, large moist and wet avalanches are possible above approximately 2200 m.

Especially on very steep west, north and east facing slopes and above approximately 2600 m numerous medium-sized and large moist and wet avalanches are possible as a consequence of the snowfall. Wet avalanches can as before be released by a single winter sport participant.

As the day progresses as a consequence of the new snow there will be an increase in the danger of moist and wet avalanches. Individual gliding avalanches can also occur, caution is to be exercised in particular on very steep grassy slopes in the regions with a lot of snow.

Snowpack

Danger patterns

dp.10: springtime scenario

dp.6: cold, loose snow and wind

The sleet will give rise to unfavourable bonding of the snowpack. Below approximately 2200 m a little snow is lying.

Danger Level 1 - Low
