

Danger Level 1 - Low

Tendency: Constant avalanche danger →
on Saturday 22 03 2025

Wet snow

Snowpack stability: **very poor**

Frequency: **few**

Avalanche size: **small**

Wet snow slides and avalanches are possible in isolated cases.

Adjacent to ridgelines and in gullies and bowls and above approximately 1900 m gliding avalanches and snow slides are possible, but they will be mostly small. The avalanche prone locations are to be found also at the base of rock walls and on steep slopes.

Snowpack

Further warming. The old snowpack will become gradually moist.
