

ALPI CARNICHE OCCIDENTALI

Avalanche Bulletin N. 212/2025 issued at 14:00 on 18/03/2025
48 hours validity. Next issue on 19/03/2025

By the METEOMONT Service of the ARMA dei CARABINIERI ITALY
In collaboration with Air Force Meteorological Service

Situation on 18/03/2025

	DANGER PATTERNS: snow with weak cohesion and wind.			Snow level (m.a.s.l.)	North	South	
					1300	1500 - 1600	
				Snow depth (cm)	ground snow	new snow	Elevation (m.a.s.l.)
	DANGER PATTERNS: spring like situation.				070	000	1870
					001	000	1425

REGISTERED AVALANCHES: Several of medium size, The two types of full-depth snow avalanches.

FORECAST 19/03/2025

Danger level: CONSIDERABLE 3

DANGER PATTERNS: snow with weak cohesion and wind.

DANGER PATTERNS: spring like situation.

SNOWPACK: Snowpack stability is poor on some points (areas) above 1800 m.a.s.l. All all exposures are critical, large avalanches are possible.
Snowpack stability is moderate on few points (areas) below 1800 m.a.s.l. All isolated slopes are critical, medium avalanches are possible.

WARNING

Due to the snow cover conditions, outdoor activities beyond the maintained and marked tracks require an excellent evaluation of local danger points.

------------------------------------------------------------------------------------	----------	-------------------------------------------------------------------------------------	---------------------	-------------------------------------------------------------------------------------	------------------------	-------------------------------------------------------------------------------------	----------	-------------------------------------------------------------------------------------	--------------	--------------------------------------------------------------------------------------	---------------	---------------------------------------------------------------------------------------	-------------------------------	---------------------------------------------------------------------------------------	---------

According to EAWS standards Meteomont bulletin is a synoptic-scale system (regional scale). It shall be the user's responsibility to correlate the danger level evaluation of the bulletin with a detailed and expertise analysis of the zonal hazards (single slope), that could be markedly different. Meteorological forecast are issued at UTC (for Italy: in winter time UTC+1; in summer time UTC+2).

Bulletin is subjected to check processes through: the record of Observers and Avalanches and snow Experts data in C-Sifa; the validation by forecasters; the certification by Meteomont Section.
