

Danger Level 2 - Moderate

Wind slabs at high altitude.

The avalanche prone locations are to be found in particular adjacent to ridgelines above approximately 2000 m and in gullies and bowls, and behind abrupt changes in the terrain. Wind-loaded slopes where weaknesses exist in the old snowpack are unfavourable.

Snowpack

Danger patterns dp.6: cold, loose snow and wind dp.2: gliding snow

The snowpack will become in some cases unfavourable. In the last few days visible wind slabs formed especially adjacent to ridgelines and in gullies and bowls. Also shady slopes where weaknesses exist in the old snowpack are dangerous. Whumpfung sounds and the formation of shooting cracks when stepping on the snowpack serve as an alarm indicating the danger.

Danger Level 1 - Low

Tendency: Constant avalanche danger →
on Saturday 01 03 2025

Gliding snow

1500m

Snowpack stability: fair

Frequency: few

Avalanche size: small

Gliding avalanches and moist snow slides are possible in isolated cases.
There is a danger of moist snow slides during the day.

Snowpack

Danger patterns

dp.2: gliding snow

dp.2: gliding snow

As a consequence of highly fluctuating temperatures and solar radiation the snowpack consolidated during the last few days.
