Snowpack stability: fair  
Frequency: few  
Avalanche size: small

PM:

Tendency: Constant avalanche danger  
on Thursday 01 05 2025 →

Wet snow

Snowpack stability: fair  
Frequency: some  
Avalanche size: medium

Gliding snow

Snowpack stability: fair  
Frequency: some  
Avalanche size: medium

As a consequence of warming during the day and solar radiation the avalanche prone locations will become more prevalent as the day progresses.

As the moisture increases more moist and wet avalanches are possible. They can be released in deep layers of the snowpack. Gliding avalanches can also occur. The avalanche prone locations are to be found in all aspects at elevated altitudes.

Snowpack

Error: Incomplete joker sentence

Tendency

The weather will be mostly sunny. The conditions remain spring-like.
