AVALANCHE BULLETIN - ISSUED AT on 15/12/2023
by Servizio METEOMONT dell'ARMA dei CARABINIERI
in collaboration with Italian Air Force Meteorological Service

WARNING - SIGNIFICANT AND/OR INTENSE PHENOMENA

Il manto nevoso presente a 2000m ha i seguenti spessori: settori meridionali:10-20 cm; settori occidentali: 20-35cm; settori settentrionali 25-60cm. In alta quota, il vento ha contribuito a rimaneggiare notevolmente il manto, determinando un innevamento molto discontinuo, con ampie superfici erose in prossimità delle creste e formando accumuli sui versanti sottovento e all'imbocco dei canali. For further information and details on weather forecasts and conditions please refer to www.meteoam.it

According to EAWS standards Meteomont bulletin is a synoptic-scale system (regional scale). It shall be the user's responsibility to correlate the danger level evaluation of the bulletin with a detailed and expertise analysis of the zonal hazards (single slope), that could be markedly different. Meteorological forecast are issued at UTC (for Italy: in winter time UTC+1; in summer time UTC+2).
