

Avalanche danger

updated on 11.5.2024, 17:00

Morning

As the day progresses

region A

Low (1) Dry avalanches, whole day

No distinct avalanche problem

Individual avalanche prone locations for dry avalanches are to be found in particular in extremely steep terrain. In high Alpine regions the avalanche prone locations are a little more prevalent. Apart from the danger of being buried, restraint should be exercised as well in view of the danger of avalanches sweeping people along and giving rise to falls. The Avalanche Warning Service currently has only a small amount of information that has been collected in the field, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

Moderate (2) Wet-snow avalanches, as the day progresses

Wet snow, Gliding snow

Avalanche prone locations

Danger description

As a consequence of warming during the day and solar radiation moist snow slides and avalanches are possible. Backcountry tours should be started early and concluded timely. In addition gliding avalanches are possible. These can reach large size in isolated cases. Caution is to be exercised in areas with glide cracks.

region B

Low (1) Dry avalanches, whole day

**No distinct avalanche problem**

Individual avalanche prone locations for dry avalanches are to be found in particular in extremely steep terrain. Apart from the danger of being buried, restraint should be exercised in particular in view of the danger of avalanches sweeping people along and giving rise to falls.

The Avalanche Warning Service currently has only a small amount of information that has been collected in the field, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

Moderate (2) Wet-snow avalanches, as the day progresses

Wet snow, Gliding snow

Avalanche prone locations

**Danger description**

As a consequence of warming during the day and solar radiation moist snow slides and avalanches are possible. Backcountry tours should be started early and concluded timely.

In addition gliding avalanches are possible. These can reach large size in isolated cases. Caution is to be exercised in areas with glide cracks.

region C

Low (1) Wet-snow avalanches, whole day

**Gliding snow**

Only a little snow is now lying. Gliding avalanches are possible, even medium-sized ones. Caution is to be exercised in areas with glide cracks.

## Snowpack and weather
