

Danger Level 2 - Moderate

Treeline

Tendency: Constant avalanche danger →
on Friday 07 03 2025

Wind slab

Treeline

Snowpack stability: **poor**

Frequency: **some**

Avalanche size: **medium**

Wind slab

Treeline

Snowpack stability: **fair**

Frequency: **few**

Avalanche size: **medium**

Wind slabs represent the main danger.

The avalanche prone locations are to be found in particular adjacent to ridgelines above approximately 2000 m and in gullies and bowls, and behind abrupt changes in the terrain. Wind-loaded slopes where weaknesses exist in the old snowpack are unfavourable.

Snowpack

Danger patterns

dp.6: cold, loose snow and wind

dp.2: gliding snow

The snowpack will become in some cases unfavourable. In the last few days visible wind slabs formed especially adjacent to ridgelines and in gullies and bowls. Also shady slopes where weaknesses exist in the old snowpack are dangerous.

Danger Level 1 - Low

Tendency: Constant avalanche danger →
on Friday 07 03 2025

Gliding snow

1300m

Snowpack stability: **fair**

Frequency: **few**

Avalanche size: **small**

Gliding avalanches and moist snow slides are possible in isolated cases.

There is a danger of moist snow slides during the day.

Snowpack

Danger patterns

dp.6: cold, loose snow and wind

dp.2: gliding snow

As a consequence of highly fluctuating temperatures and solar radiation the snowpack consolidated. In many cases new snow is lying on a moist old snowpack.
