

Danger Level 1 - Low

Tendency: Constant avalanche danger →
on Wednesday 08 01 2025

Wet snow

1500m

Snowpack stability: **poor**

Frequency: **few**

Avalanche size: **small**

Mostly small moist snow slides and avalanches are possible in isolated cases.

Hardly any wet snow slides and avalanches are possible, but they will be mostly small.

Snowpack

The weather conditions as the day progresses will give rise to increasing moistening of the old snowpack over a wide area. Strong westerly wind.

Danger Level 1 - Low

Tendency: Constant avalanche danger →
on Wednesday 08 01 2025

Persistent
weak layer

Snowpack stability: **poor**
Frequency: **few**
Avalanche size: **small**

Especially gullies and bowls and above approximately 1800 m: Small and medium sized avalanches are possible in isolated cases.

In very isolated cases weak layers exist in the old snowpack especially on wind-protected northwest, north and northeast facing slopes. Weak layers in the old snowpack can be released in isolated cases and mostly by large additional loads.

Snowpack

The weather conditions as the day progresses will give rise to increasing moistening of the old snowpack over a wide area. Strong westerly wind.
