

Avalanche danger
updated on 14.5.2024, 17:00

region A Considerable (3+)

New snow

Avalanche prone locations

Danger description

Large quantities of fresh snow and the wind-drifted snow are prone to triggering. Single winter sport participants can release avalanches. An increasing number of natural avalanches are to be expected. Avalanches can reach large size. The conditions are critical for backcountry touring.

Moderate (2)

Wet snow, Gliding snow

As a consequence of the rain more frequent wet and gliding avalanches are possible. These can reach large size in isolated cases in particular on north facing slopes.

region B

Considerable (3-)

New snow

Avalanche prone locations

Danger description

The new snow and wind slabs are prone to triggering. Single winter sport participants can release avalanches. These can reach large size in isolated cases. Backcountry touring calls for experience in the assessment of avalanche danger.

Moderate (2)

Wet snow, Gliding snow

As a consequence of the rain more frequent wet and gliding avalanches are possible. These can reach large size in isolated cases in particular on north facing slopes.

region C

Moderate (2=)

Wind slab

Avalanche prone locations

Danger description

The more recent wind slabs are in some cases prone to triggering. They are to be evaluated with care and prudence in particular in very steep terrain. The avalanche prone locations are to be found in particular in gullies and bowls, and behind abrupt changes in the terrain. Careful route selection is recommended. The Avalanche Warning Service currently has only a small amount of information that has been collected in the field, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

Low (1)

Wet snow, Gliding snow

In particular on very steep north facing slopes individual wet and gliding avalanches are possible.

region D

Low (1)

No distinct avalanche problem
Individual avalanche prone locations are to be found in particular in extremely steep terrain. Apart from the danger of being buried, restraint should be exercised in particular in view of the danger of avalanches sweeping people along and giving rise to falls. The Avalanche Warning Service currently has only a small amount of information that has been collected in the field, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

Low (1)

Wet snow, Gliding snow
In particular on very steep north facing slopes individual wet and gliding avalanches are possible.

region E

Low (1)

Wet snow, Gliding snow
In particular on very steep north facing slopes individual wet and gliding avalanches are possible.
