

Avalanche danger

updated on 1.5.2025, 17:00

Morning

As the day progresses

region A

Low (1) Dry avalanches, whole day

No distinct avalanche problem

Individual avalanche prone locations for dry avalanches are to be found in particular on extremely steep north facing slopes at elevated altitudes. Apart from the danger of being buried, restraint should be exercised in particular in view of the danger of avalanches sweeping people along and giving rise to falls.
The Avalanche Warning Service currently has only a small amount of information that has been collected in the field, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

Considerable (3) Wet-snow and gliding avalanches, as the day

Wet snow, Gliding snow

The old snowpack will become increasingly wet all the way through, also on steep north facing slopes at elevated altitudes.
As a consequence of warming during the day and solar radiation medium-sized and, in isolated cases, large wet and gliding avalanches are to be expected. Caution is to be exercised in particular on west and east facing slopes below approximately 3200 m, as well as on north facing slopes below approximately 2800 m.
Backcountry tours should be started early and concluded timely.

region B

Low (1) Dry avalanches, whole day

**No distinct avalanche problem**

Individual avalanche prone locations for dry avalanches are to be found in particular on extremely steep north facing slopes at elevated altitudes. Apart from the danger of being buried, restraint should be exercised in particular in view of the danger of avalanches sweeping people along and giving rise to falls.

The Avalanche Warning Service currently has only a small amount of information that has been collected in the field, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

Moderate (2) Wet-snow and gliding avalanches, as the day progresses**Wet snow, Gliding snow**

The old snowpack will become increasingly wet all the way through, also on steep north facing slopes at elevated altitudes.

As a consequence of warming during the day and solar radiation medium-sized wet and gliding avalanches are to be expected. Caution is to be exercised in particular on west and east facing slopes below approximately 3200 m, as well as on north facing slopes below approximately 2800 m.

Backcountry tours should be started early and concluded timely.
