### WARNING - SIGNIFICANT AND/OR INTENSE PHENOMENA

Attualmente sono presenti, sui settori meridionali, circa 10-15 cm ai 2000m. I quantitativi aumentano progressivamente procedendo verso nord, con circa 25-30 cm a 2000 sui settori occidentali e 25-50 su quelli settentrionali. In alta quota, il vento ha contribuito a rimaneggiare notevolmente il manto, determinando un innevamento molto discontinuo, con ampie superfici in prossimità delle creste e formando i primi accumuli sui versanti sottovento e all'imbocco dei canali.
