

Avalanche danger
updated on 25.4.2024, 17:00

region A

Considerable (3-)

Wind slab

Avalanche prone locations

Danger description

As a consequence of a strengthening foehn wind, avalanche prone wind slabs will form in the course of the day over a wide area. These can be released by a single winter sport participant. The new snow of the last few days can still be released in some cases. Avalanches can in some cases reach large size. Backcountry touring calls for experience in the assessment of avalanche danger and careful route selection.

Considerable (3)

Gliding snow

Avalanche prone locations

Danger description

On steep grassy slopes numerous gliding avalanches are to be expected, even large ones. Transportation routes can be endangered. Caution is to be exercised in areas with glide cracks. In addition as the day progresses small and medium-sized loose snow avalanches are possible.

region B

Considerable (3)

Gliding snow

Avalanche prone locations

Danger description

On steep grassy slopes numerous gliding avalanches are to be expected, even large ones. Transportation routes can be endangered. Caution is to be exercised in areas with glide cracks.
In addition as the day progresses small and medium-sized loose snow avalanches are possible.

Moderate (2+)

Wind slab

Avalanche prone locations

Danger description

As a consequence of a strengthening foehn wind, avalanche prone wind slabs will form in the course of the day. The new snow of the last few days is in some cases still prone to triggering. Single winter sport participants can release avalanches in some places. Mostly these are medium-sized. The number and size of avalanche prone locations will increase in the high Alpine regions.
Backcountry touring calls for careful route selection. Fresh wind slabs are to be avoided.

region C

Moderate (2+)

Wind slab

Avalanche prone locations

Danger description

As a consequence of a strengthening foehn wind, avalanche prone wind slabs will form in the course of the day. The new snow of the last few days is in some cases still prone to triggering. Single winter sport participants can release avalanches in some places. Mostly these are medium-sized. The number and size of avalanche prone locations will increase in the high Alpine regions. Backcountry touring calls for careful route selection. Fresh wind slabs are to be avoided.

Moderate (2)

Gliding snow

Avalanche prone locations

Danger description

On steep grassy slopes numerous gliding avalanches are to be expected, in particular medium-sized ones. Caution is to be exercised in areas with glide cracks. In addition as the day progresses small and medium-sized loose snow avalanches are possible.

region D

Moderate (2=)

Wind slab, Persistent weak layers

Avalanche prone locations

Danger description

As a consequence of a strengthening southerly wind, sometimes avalanche prone wind slabs will form in particular at elevated altitudes. Dry avalanches can additionally in isolated cases be released in near-surface layers also. Single winter sport participants can release avalanches in some places. Mostly these are medium-sized. Backcountry touring and other off-piste activities call for careful route selection.

region E

Moderate (2=)

New snow

Avalanche prone locations

Danger description

As the day progresses as a consequence of the snowfall there will be an increase in the danger of dry avalanches within the current danger level. The new snow and wind slabs are in some cases prone to triggering. Single persons can release avalanches, including medium-sized ones. Backcountry touring calls for careful route selection.

region F

Moderate (2=)

Wind slab, Persistent weak layers

Avalanche prone locations

Danger description

As a consequence of a strengthening southerly wind, sometimes avalanche prone wind slabs will form in particular at elevated altitudes. Dry avalanches can additionally in isolated cases be released in near-surface layers also. Single winter sport participants can release avalanches in some places. Mostly these are medium-sized. Backcountry touring and other off-piste activities call for careful route selection.

Moderate (2)

Gliding snow

Avalanche prone locations

Danger description

On steep grassy slopes numerous gliding avalanches are to be expected, in particular medium-sized ones. Caution is to be exercised in areas with glide cracks. In addition as the day progresses small and medium-sized loose snow avalanches are possible.

region G

Low (1)

Gliding snow

On steep grassy slopes gliding avalanches and snow slides are possible, but they will be mostly small. Caution is to be exercised in areas with glide cracks.
