

Danger Level 2 - Moderate

Tendency: **Constant avalanche danger** →
on Saturday 12 04 2025

Wet snow

Snowpack stability: **very poor**

Frequency: **few**

Avalanche size: **medium**

Persistent weak layer

Snowpack stability: **poor**

Frequency: **few**

Avalanche size: **medium**

Wet snow

Snowpack stability: **very poor**

Frequency: **few**

Avalanche size: **small**

Moist and wet avalanches are the main danger.

Above approximately 1800 m medium-sized wet snow slides and avalanches are possible. As the day progresses the likelihood of avalanches being released will increase in particular on steep sunny slopes. Also bases of rock walls are especially unfavourable. Individual weak layers exist in the snowpack on steep northeast, north and northwest facing slopes.

Snowpack

Danger patterns

dp.10: springtime scenario

The new snow of the last few days has settled a little. The snowpack remains generally moist. The weather conditions will give rise to gradual moistening of the snowpack.
