

Danger Level 2 - Moderate

Tendency: Constant avalanche danger →

on Friday 11 04 2025

Wet snow

Snowpack stability: **very poor**

Frequency: **few**

Avalanche size: **medium**

Persistent weak layer

Snowpack stability: **poor**

Frequency: **few**

Avalanche size: **medium**

Wet snow

Snowpack stability: **very poor**

Frequency: **few**

Avalanche size: **small**

Moist and wet avalanches are the main danger.

Above approximately 1800 m medium-sized wet snow slides and avalanches are possible. As the day progresses the likelihood of avalanches being released will increase in particular on steep sunny slopes. Also bases of rock walls are especially unfavourable. Individual weak layers exist in the snowpack on steep northeast, north and northwest facing slopes.

Snowpack

The new snow of the last few days has settled a little. The snowpack remains generally moist. A little new snow above approximately 1700 m.
