

Danger Level 2 - Moderate

Tendency: Constant avalanche danger →

on Monday 31 03 2025

Wind slab

Snowpack stability: **fair**

Frequency: **some**

Avalanche size: **large**

Wet snow

Snowpack stability: **poor**

Frequency: **few**

Avalanche size: **small**

The wind slabs represent the main danger.

The avalanche prone locations are to be found in particular at the base of rock walls and behind abrupt changes in the terrain and adjacent to ridgelines and in gullies and bowls. The sometimes strong wind will transport the new snow. The solar radiation will give rise as the day progresses to moistening of the snowpack in some cases.

The avalanches can be released by large loads.

Snowpack

The wind slabs are in some cases prone to triggering. Weak layers exist in the snowpack.

Tendency

The weather will be mostly sunny. Over a wide area strong wind.

Danger Level 2 - Moderate

Tendency: Constant avalanche danger →

on Monday 31 03 2025

Wind slab

Snowpack stability: **fair**

Frequency: **some**

Avalanche size: **medium**

Wet snow

Snowpack stability: **poor**

Frequency: **few**

Avalanche size: **small**

Moderate avalanche danger will prevail.

The avalanche prone locations are to be found in particular at the base of rock walls and behind abrupt changes in the terrain and adjacent to ridgelines and in gullies and bowls. The wind slabs remain in some cases prone to triggering in particular on steep shady slopes at elevated altitudes.

The avalanches can be released, mostly by large loads.

Snowpack

The solar radiation will give rise as the day progresses to moistening of the snowpack in some cases. Individual weak layers exist in the snowpack. In particular on sunny slopes at low and intermediate altitudes a little snow is lying.

Tendency

The weather will be mostly sunny. Over a wide area strong wind.

Danger Level 2 - Moderate

Tendency: Constant avalanche danger →

on Monday 31 03 2025

Wet snow

Snowpack stability: **poor**

Frequency: **few**

Avalanche size: **medium**

On sunny slopes no snow is lying at low and intermediate altitudes.

The avalanche prone locations are to be found in particular on steep shady slopes and adjacent to ridgelines and in gullies and bowls.

The avalanches can be released by large loads.

Snowpack

The weather conditions will give rise to moistening of the snowpack.

Tendency

The weather will be mostly sunny. Over a wide area strong wind.
