

## Danger Level 3 - Considerable

**Tendency: Constant avalanche danger**  
on Friday 14 03 2025

Wind slab

Snowpack stability: **poor**

Frequency: **some**

Avalanche size: **large**

New snow

Snowpack stability: **poor**

Frequency: **some**

Avalanche size: **medium**

Wind slab

Snowpack stability: **fair**

Frequency: **few**

Avalanche size: **medium**

## New snow and wind slabs represent the main danger.

The new snow and wind slabs of the last few days can be released easily or naturally in all aspects above approximately 1800 m. The avalanche prone locations are to be found in gullies and bowls, and behind abrupt changes in the terrain. Wind-loaded slopes where surface hoar has been covered with snow are unfavourable.

## Snowpack

### Danger patterns

dp.6: cold, loose snow and wind

dp.1: deep persistent weak layer

Over a wide area over a wide area 25 to 40 cm of snow, but less in some localities, has fallen since Monday above approximately 1700 m. The sometimes strong wind has transported some snow. This situation gave rise to unfavourable bonding of the snowpack over a wide area.

The new snow and wind slabs are prone to triggering. This applies especially at transitions from a shallow to a deep snowpack, when entering gullies and bowls for example.

New snow and wind slabs are lying on a weakly bonded old snowpack, in particular on shady slopes.

Large-grained weak layers exist in the snowpack on shady slopes.

## Danger Level 2 - Moderate

**Tendency: Constant avalanche danger** →  
on Friday 14 03 2025

New snow

1500m

Snowpack stability: **fair**

Frequency: **some**

Avalanche size: **medium**

Wind slab

1500m

Snowpack stability: **poor**

Frequency: **some**

Avalanche size: **medium**

**Dry and moist avalanches are likely to occur.**

The new snow and wind slabs can be released naturally in all aspects. In particular on steep slopes and on very steep grassy slopes mostly small moist loose snow avalanches are possible as a consequence of the new snow.

### Snowpack

#### Danger patterns

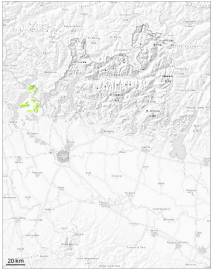

dp.6: cold, loose snow and wind

dp.2: gliding snow

In many cases new snow and wind slabs are lying on a moist old snowpack.

Danger Level 1 - Low

Tendency: Constant avalanche danger

on Friday 14 03 2025

Wet snow

New snow

1200m

1200m

Snowpack stability: fair

Frequency: few

Avalanche size: small

Snowpack stability: fair

Frequency: few

Avalanche size: small

Moist and wet snow slides and small avalanches are possible.

As a consequence of the precipitation individual small moist and wet avalanches are possible.

Snowpack

Danger patterns

dp.2: gliding snow

dp.10: springtime scenario

The snowpack will become in most cases wet all the way through.
