

Danger Level 1 - Low

Tendency: Constant avalanche danger  
on Wednesday 05 03 2025

Wet snow

1900m

Snowpack stability: fair

Frequency: few

Avalanche size: medium

Wind slab

1900m

Snowpack stability: fair

Frequency: few

Avalanche size: medium

Wind slabs at high altitude. Below approximately 1900 m small and, in isolated cases, medium-sized moist snow slides and avalanches are possible.

Adjacent to ridgelines and in gullies and bowls and on very steep northeast, north and northwest facing slopes individual slab avalanches are possible, even medium-sized ones.

Snowpack

The old snowpack will be generally stable. The more recent wind slabs have formed in particular in gullies and bowls and at elevated altitudes. Sunshine and high temperatures will give rise as the day progresses to increasing moistening of the snowpack in some cases below approximately 1900 m.
