

Avalanche danger
updated on 23.11.2024, 17:00

region A Considerable (3-)

New snow, Wind slab

Avalanche prone locations

Danger description

The new snow and wind slabs of the last few days can be released by a single winter sport participant. In addition easily released wind slabs will form on Sunday. In some cases avalanches are medium-sized. High Alpine regions: Avalanches can in some cases be released in near-ground layers and reach large size in isolated cases, especially on steep north and east facing slopes. Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger. The Avalanche Warning Service currently has only a small amount of information that has been collected in the field, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

Low (1)

Wet snow

In particular on cut and grassy slopes mostly small gliding avalanches and moist snow slides are to be expected. Restraint should be exercised because avalanches can sweep people along and give rise to falls.

region B

Moderate (2+)

Wind slab

Avalanche prone locations

Danger description

As a consequence of a moderate to strong foehn wind, sometimes avalanche prone wind slabs will form. In addition the wind slabs of the last few days are capable of being triggered in isolated cases still. In isolated cases avalanches are medium-sized. The wind slabs are to be evaluated with care and prudence in very steep terrain. The Avalanche Warning Service currently has only a small amount of information that has been collected in the field, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

Low (1)

Wet snow

In particular on cut and grassy slopes mostly small gliding avalanches and moist snow slides are to be expected. Restraint should be exercised because avalanches can sweep people along and give rise to falls.

region C

Moderate (2=)

Wind slab

Avalanche prone locations

Danger description

Thus far only a little snow is lying. As a consequence of a moderate to strong southerly wind, sometimes avalanche prone wind slabs will form. In addition the mostly small wind slabs of the last few days are capable of being triggered in isolated cases still. The wind slabs are to be found in particular in gullies and bowls. Mostly avalanches are small. The wind slabs are to be evaluated with care and prudence in particular in terrain where there is a danger of falling. The Avalanche Warning Service currently has only a small amount of information that has been collected in the field, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

region D

Moderate (2=)

Wind slab

Avalanche prone locations

Danger description

Thus far only a little snow is lying. As a consequence of a moderate to strong southerly wind, sometimes avalanche prone wind slabs will form. In addition the mostly small wind slabs of the last few days are capable of being triggered in isolated cases still. The wind slabs are to be found in particular in gullies and bowls. Mostly avalanches are small. The wind slabs are to be evaluated with care and prudence in particular in terrain where there is a danger of falling.

The Avalanche Warning Service currently has only a small amount of information that has been collected in the field, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

Low (1)

Wet snow

In particular on cut and grassy slopes mostly small gliding avalanches and moist snow slides are to be expected. Restraint should be exercised because avalanches can sweep people along and give rise to falls.

region E

Low (1)

Wind slab

The fresh and older wind slabs are in individual cases still prone to triggering. Individual avalanche prone locations are to be found in particular in extremely steep terrain and in gullies and bowls.

Restraint should be exercised because avalanches can sweep people along and give rise to falls.

region F

Low (1)

Wind slab

The fresh and older wind slabs are in individual cases still prone to triggering. Individual avalanche prone locations are to be found in particular in extremely steep terrain and in gullies and bowls.

Restraint should be exercised because avalanches can sweep people along and give rise to falls.

Low (1)

Wet snow

In particular on cut and grassy slopes mostly small gliding avalanches and moist snow slides are to be expected. Restraint should be exercised because avalanches can sweep people along and give rise to falls.
