1800m

Wet snow

1800m

Above approximately 1800 m small slab avalanches are possible. Below approximately 1800 m mostly small moist and wet avalanches are possible.

In particular shady places that are protected from the wind as well as transitions into gullies and bowls: Here only isolated slab avalanches are possible, but they will be mostly small. Avalanches can be released in the old snowpack, mostly by large additional loads in isolated cases.

Snowpack

The new snow of yesterday is lying on the quite favourable surface of an old snowpack.
