

Danger Level 1 - Low

Tendency: Constant avalanche danger →
on Tuesday 23 12 2025

Wet snow

2000m

Persistent
weak layer

2000m

Moist snow slides and avalanches are possible in isolated cases.

Until the temperature falls individual mostly small wet avalanches are possible as the day progresses.

Snowpack

The snowpack will be subject to considerable local variations below approximately 1800 m. The surface of the snowpack will freeze to form a strong crust only at high altitudes.
