

Danger Level 2 - Moderate

Tendency: Constant avalanche danger →
on Tuesday 06 01 2026

New snow

New snow represents the main danger.

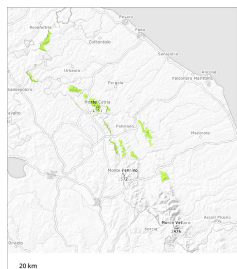

In particular on very steep slopes and above approximately 1600 m small and medium-sized loose snow avalanches are possible as a consequence of the new snow. Dry avalanches can additionally be released in near-surface layers, even by small loads in isolated cases.

Snowpack

The old snowpack remains generally favourable. Faceted weak layers exist in the top section of the old snowpack especially at high altitude. Weak layers in the old snowpack necessitate caution. New snow above approximately 1600 m.

Danger Level 1 - Low

New snow

New snow requires caution.

On very steep slopes individual dry loose snow avalanches are possible, but they will be mostly small.

Snowpack

Some new snow above approximately 1400 m.
