

Danger Level 1 - Low

Tendency: Constant avalanche danger →
on Monday 15 12 2025

Low avalanche danger will prevail.

Avalanches can scarcely be released. Very isolated avalanche prone locations are to be found on very steep shady slopes at elevated altitudes.

Apart from the danger of being buried, restraint should be exercised in particular in view of the danger of avalanches sweeping people along and giving rise to falls.

Snowpack

The snowpack will be in most cases stable.

Outgoing longwave radiation during the night will be quite good.

Steep sunny slopes: The solar radiation will give rise as the day progresses to slight moistening of the snowpack.

From a snow sport perspective, in most cases insufficient snow is lying.

Tendency

Low avalanche danger will prevail.
