### AVALANCHE PROBLEMS

	NEW SNOW		WIND - DRIFTED SNOW		PERSISTENT WEAK LAYERS		WET SNOW		GLIDING SNOW		SNOW CORNICES		NO EVIDENT AVALANCHE PROBLEM.
------------------------------------------------------------------------------------	----------	-------------------------------------------------------------------------------------	---------------------	-------------------------------------------------------------------------------------	------------------------	-------------------------------------------------------------------------------------	----------	-------------------------------------------------------------------------------------	--------------	---------------------------------------------------------------------------------------	---------------	---------------------------------------------------------------------------------------	-------------------------------

According to EAWS standards Meteomont bulletin is a synoptic-scale system (regional scale). It shall be the user's responsibility to correlate the danger level evaluation of the bulletin with a detailed and expertise analysis of the zonal hazards (single slope), that could be markedly different. Meteorological forecast are issued at UTC (for Italy: in winter time UTC+1; in summer time UTC+2).

Bulletin is subjected to check processes through: the record of Observers and Avalanches and snow Experts data in C-Sifa; the validation by forecasters; the certification by Meteomont Section.
