

Danger Level 3 - Considerable

Tendency: Increasing avalanche danger
on Wednesday 28 01 2026

New snow

Wind slab

The fresh snow of the weekend and the deep wind slabs represent the main danger.

Caution is to be exercised on wind-loaded slopes adjacent to ridgelines and in gullies and bowls.

Dry slab avalanches are possible. In some cases the avalanches are medium-sized and can be released even by a single winter sport participant.

Snowpack

Danger patterns

dp.6: cold, loose snow and wind

dp.1: deep persistent weak layer

The moderate wind will transport the new snow. New snow and wind slabs are lying mostly on old snow containing large grains. The avalanche-prone wind slabs are lying on weak layers in particular on wind-protected shady slopes above approximately 1500 m. Avalanches can be released by small loads.

Tendency

New snow and wind slabs during the course of the night. Over a wide area 20 to 40 cm of snow, and even more in some localities, will fall above approximately 1000 m.

Danger Level 2 - Moderate

Tendency: Increasing avalanche danger
on Wednesday 28 01 2026

Snowpack

Danger patterns

(dp.6: cold, loose snow and wind)

The moderate wind will transport the new snow. The avalanche-prone wind slabs are lying on weak layers in particular on wind-protected shady slopes above approximately 1500 m. The snowpack will be generally subject to considerable local variations.

Tendency

Over a wide area 20 to 40 cm of snow, and even more in some localities, will fall above approximately 1000 m.

Danger Level 1 - Low

Tendency: Increasing avalanche danger
on Wednesday 28 01 2026

Fresh wind slabs represent the main danger. Faceted weak layers exist in the snowpack especially on shady slopes.

Faceted weak layers exist in the snowpack especially on shady slopes. Mostly the avalanches are small. The avalanches are only small and can only be released by large loads.

Snowpack

Danger patterns

dp.1: deep persistent weak layer

Individual avalanche prone locations are to be found in shady places that are protected from the wind.

Tendency

Over a wide area 5 to 20 cm of snow, and even more in some localities, will fall above approximately 800 m.
