

1 low      2 moderate      3 considerable      4 high      5 very high

## Danger Level 1 - Low

## **Tendency: Constant avalanche danger**

## Wet snow

2000m

## Persistent weak layer

8

Moist snow slides and avalanches are possible in isolated cases.

Until the temperature falls individual mostly small wet avalanches are possible as the day progresses.

## Snowpack

The snowpack will be subject to considerable local variations below approximately 1800 m. The surface of the snowpack will freeze to form a strong crust only at high altitudes.
