

1 low      2 moderate      3 considerable      4 high      5 very high

## Danger Level 1 - Low

**Tendency: Constant avalanche danger**  
on Thursday 22 01 2026 →

Wet snow

### Error: Incomplete joker sentence

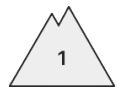

Moist and wet snow slides are possible in isolated cases. There is a danger of falling on the hard snow surface.

### Snowpack

A little new snow at high altitude. The weather conditions gave rise to significant settling of the old snowpack.

## Danger Level 1 - Low

**Tendency: Constant avalanche danger** →  
on Thursday 22 01 2026

Persistent  
weak layer

1800m

Moist slab avalanches are possible in isolated cases as before.

In particular shady places that are protected from the wind as well as transitions into gullies and bowls:  
Here slab avalanches are possible, but they will be mostly small. There is a danger of falling on the hard crust.

## Snowpack

The snowpack is largely stable. It is fairly homogeneous and its surface has a crust that is strong in many cases.

At low and intermediate altitudes hardly any snow is lying. A little new snow at intermediate altitudes.
