A horizontal color bar with five segments corresponding to the hazard levels. The segments are colored light green (1), yellow (2), orange (3), red (4), and black/red checkered (5).

## Danger Level 1 - Low

**Tendency: Constant avalanche danger** →  
on Thursday 22 01 2026

### Error: Incomplete joker sentence

The mostly small wind slabs remain in some cases prone to triggering in particular on steep shady slopes and at elevated altitudes. The avalanche prone locations are to be found in particular adjacent to ridgelines and in gullies and bowls and at transitions from a shallow to a deep snowpack. Restraint should be exercised because avalanches can sweep people along and give rise to falls.

### Snowpack

Over a wide area only a little snow is lying.

The snowpack will be subject to considerable local variations. Weak layers exist in the old snowpack. They are to be found in particular on shady slopes.

### Tendency

The weather will be clear.
