

SECTOR DOLOMITI E PREALPI VENETE

AVALANCHE BULLETIN - ISSUED AT on 27/11/2023 by Servizio METEOMONT dell'ARMA dei CARABINIERI in collaboration with Italian Air Force Meteorogical Service

WARNING - SIGNIFICANT AND/OR INTENSE PHENOMENA

Il passaggio di una serie di perturbazioni di origine atlantica ha portato nevicate modeste sui sotto settori delle Dolomiti Venete, con quota neve a partire dai 1600-1800m e depositi significativi solo oltre i 2300 - 2500m.

Le nevicate sono state costantemente associate a venti, provenienti dai quadranti meridionali di intensità da moderata a forte: l'attività eolica ha pertanto rimaneggiato la neve fresca soprattutto oltre i 2500m di quota creando zone di erosione e zone di accumulo.

Nel sotto settore delle Prealpi la presenza di neve è localizzata in conche, canaloni e vallette delle zone in ombra o dei versanti nord dei massicci montuosi sopra i 2000 metri.

Agli escursionisti che prevedono di salire ad alta quota, si consiglia di prestare attenzione ai piccoli accumuli eolici in prossimità di creste, cambi di pendenza e canali. Attenzione va posta anche alle zone ghiacciate. Attrezzatura e abbigliamento adeguato risultano indispensabili.

According to EAWS standards Meteomont bulletin is a synoptic-scale system (regional scale). It shall be the user's responsibility to correlate the danger level evaluation of the bulletin with a detailed and expertise analysis of the zonal hazards (single slope), that could be markedly different. Meteorological forecast are issued at UTC (for Italy: in winter time UTC+1: in summer time UTC+2).
