#### **Danger Level 3 - Considerable**

As a consequence of the precipitation the avalanche prone locations will become more prevalent. Wet avalanches are the main danger.

Above approximately 2400 m snow will fall. Strong wind above approximately 1500 m. As a consequence of the precipitation more natural wet avalanches are possible. Gliding avalanches are also to be expected. The avalanche prone locations are to be found in all aspects.

#### Snowpack

The weather conditions gave rise to thorough wetting of the snowpack over a wide area in all aspects. On south facing slopes a little snow is lying at low and intermediate altitudes.

### Tendency

Over a wide area precipitation. Above approximately 2000 m snow will fall.

#### **Danger Level 2 - Moderate**

As a consequence of the precipitation the avalanche prone locations will become more prevalent. Wet avalanches are the main danger.

Strong wind above approximately 1500 m. As a consequence of the precipitation more natural wet avalanches are possible. Gliding avalanches are also to be expected.

The avalanche prone locations are to be found in particular on shady slopes.

#### Snowpack

The weather conditions gave rise to thorough wetting of the snowpack over a wide area. On south facing slopes no snow is lying.

### Tendency

Over a wide area rain.
