## **Danger Level 2 - Moderate**

### New snow and wind slabs above approximately 2000 m.

The avalanche prone locations are to be found in particular adjacent to ridgelines above approximately 2000 m and in gullies and bowls, and behind abrupt changes in the terrain. Wind-loaded slopes where weaknesses exist in the old snowpack are unfavourable.

#### Snowpack

Danger patterns

(dp.6: cold, loose snow and wind

dp.2: gliding snow

The snowpack will become in some cases unfavourable. In the last few days visible wind slabs formed especially adjacent to ridgelines and in gullies and bowls. Also shady slopes where weaknesses exist in the old snowpack are dangerous. Whumpfing sounds and the formation of shooting cracks when stepping on the snowpack serve as an alarm indicating the danger.

## **Danger Level 1 - Low**

**Tendency: Constant avalanche danger** on Tuesday 04 03 2025

 $\longrightarrow$ 

Snowpack stability: fair
Frequency: few
Avalanche size: small

Gliding avalanches and moist snow slides are possible in isolated cases.

There is a danger of moist snow slides during the day.

## Snowpack

**Danger patterns** 

dp.6: cold, loose snow and wind

(dp.2: gliding snow)

As a consequence of highly fluctuating temperatures and solar radiation the snowpack consolidated during the last few days. In many cases new snow is lying on a moist old snowpack.
