Danger Level 3 - Considerable

New snow and wet snow represent the main danger. Medium-sized and, in isolated cases, large moist and wet avalanches are possible above approximately 2200 m.

Especially on very steep west, north and east facing slopes and above approximately 2600 m numerous medium-sized and large moist and wet avalanches are possible as a consequence of the snowfall. Wet avalanches can as before be released by a single winter sport participant.

As the day progresses as a consequence of the new snow there will be an increase in the danger of moist and wet avalanches. Individual gliding avalanches can also occur, caution is to be exercised in particular on very steep grassy slopes in the regions with a lot of snow.

Snowpack

Danger patterns dp.10: springtime scenario dp.6: cold, loose snow and wind

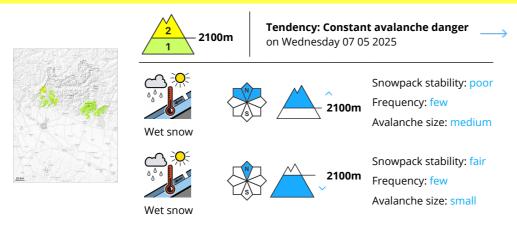

The sleet will give rise to unfavourable bonding of the snowpack. Below approximately 2200 m a little snow is lying.

Danger Level 2 - Moderate

Moist and wet avalanches are the main danger.

Outgoing longwave radiation during the night will be severely restricted. Small and, in isolated cases, medium-sized moist and wet avalanches are possible.

Danger Level 1 - Low

Tendency: Constant avalanche danger on Wednesday 07 05 2025

Snowpack stability: fair Frequency: few Avalanche size: small

Moist and wet avalanches are the main danger.

Outgoing longwave radiation during the night will be severely restricted. Individual small wet avalanches are possible.
