

10

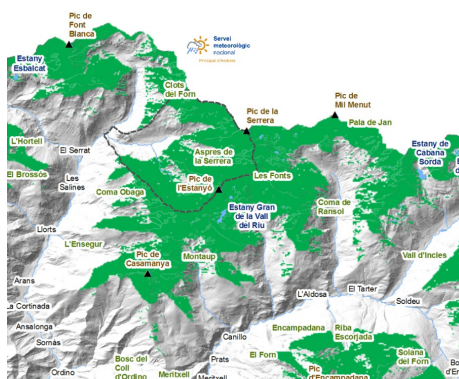

A clear night will be followed in the early morning by quite favourable conditions generally, but the danger of wet avalanches will increase later. Individual gliding avalanches can also be released in the night or in the morning. This applies especially in case of very steep starting zones.

The surface of the snowpack will freeze to form a strong crust and will soften earlier than the day before. Caution is to be exercised in areas with glide cracks. At high altitudes and in high Alpine regions the amount of snow is subject to significant local variations. The weather will be very warm.

North zone					Center area					South zone				
		Snow thickness					Snow thickness					Snow thickness		
Snowpack		1500m	2000m	2500m	Snowpack		1500m	2000m	2500m	Snowpack		1500m	2000m	2500m

Detailed information for protected areas

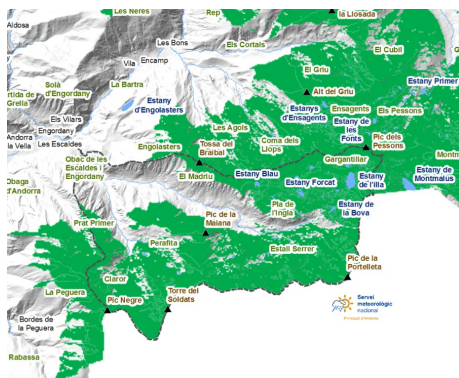

SORTENY

There are fewer and fewer skiable areas left, but some extremely steep channels that give access to passes and peaks can still have cross-country avalanches.

COMAPEDROSA

Some ledges that remain on the ridges of Medacorba can still come off due to the extreme heat. Mountain skiing routes are few, with approaches on foot and discontinuities.

MADRIU-PERAFITA-CLAROR

There is still snow on the southern slopes of Engaït, Picos Negres d'Envalira and l'Illa which allow you to connect with El Madriu, Grau Roig and Pas de la Casa, although with discontinuities.
