

Danger Level 2 - Moderate

Tendency: Constant avalanche danger
on Monday 04 05 2026

Wet snow

Wet loose snow avalanches are the main danger.

Below approximately 2200 m less snow than usual is lying.

A clear night will be followed in the early morning by quite favourable conditions generally, but the danger of wet and gliding avalanches will increase later. As a consequence of warming during the day and the solar radiation, the likelihood of wet avalanches being released will increase gradually in particular on steep slopes above approximately 2300 m. During the morning as well, individual, then as the day progresses more wet and gliding avalanches are possible. The avalanche danger will increase but remain within the current danger level. Mostly the wet avalanches are rather small. Especially on very steep slopes medium-sized avalanches must be expected in isolated cases.

The avalanche prone locations are to be found in particular on very steep shady slopes above approximately 2300 m. In particular bases of rock walls are precarious.

Backcountry tours, off-piste skiing and ascents to alpine cabins should be started and concluded early.

As the temperature drops there will be a gradual decrease in the avalanche danger towards the evening.

Weak layers in the lower part of the snowpack can be released in isolated cases and mostly by large additional loads on shady slopes. In particular on very steep shady slopes only isolated small to medium-sized avalanches are possible.

Snowpack

Danger patterns

dp.10: springtime scenario

Outgoing longwave radiation during the night will be good. The snowpack is moist and its surface has a strong melt-freeze crust.

The weather will be very mild over a wide area. These conditions will cause a very rapid weakening of the snowpack. Sunshine and high temperatures will give rise as the day progresses to a loss of strength within the snowpack over a wide area. The surface of the snowpack will already soften in the late morning.

Danger Level 1 - Low

Tendency: Constant avalanche danger
