A clear night will be followed in the early morning by quite favourable conditions generally, but the danger of wet avalanches will increase later. Individual gliding avalanches can also be released in the night or in the morning. This applies especially in case of very steep starting zones.

The surface of the snowpack will freeze to form a strong crust and will soften quickly. Caution is to be exercised in areas with glide cracks. Hardly any snow is lying. At high altitudes and in high Alpine regions the amount of snow is subject to significant local variations. The weather will be very warm.

North zone					Center area					South zone				
		Snow thickness					Snow thickness					Snow thickness		
Snowpack		1500m	2000m	2500m	Snowpack		1500m	2000m	2500m	Snowpack		1500m	2000m	2500m

The map shows the proposed cable car route (green line) connecting the Vall de Navacerrada to the Vall de Ardenya. The route starts in the Vall de Navacerrada, passes through the Vall de Ardenya, and ends in the Vall de Navacerrada. The map includes various towns and peaks, with a legend for the cable car route and a weather icon.

In the Ransol and Sorteny valleys, only some canals isolated from the walls of the cirques are skiable. They can be climbed with crampons and skied down, as they are narrow. Even so, there are still many congested areas that cross the roads and we will have to watch out for slips that can lead us into the rivers.

Some ledges that remain on the ridges of Medacorba can still come off due to the extreme heat. Mountain skiing routes are few, with approaches on foot and discontinuities.

The nes is increasingly discontinuous, with the possibility of skiing only some channels of the north-facing cirques.
